

Driller Valve

Detail

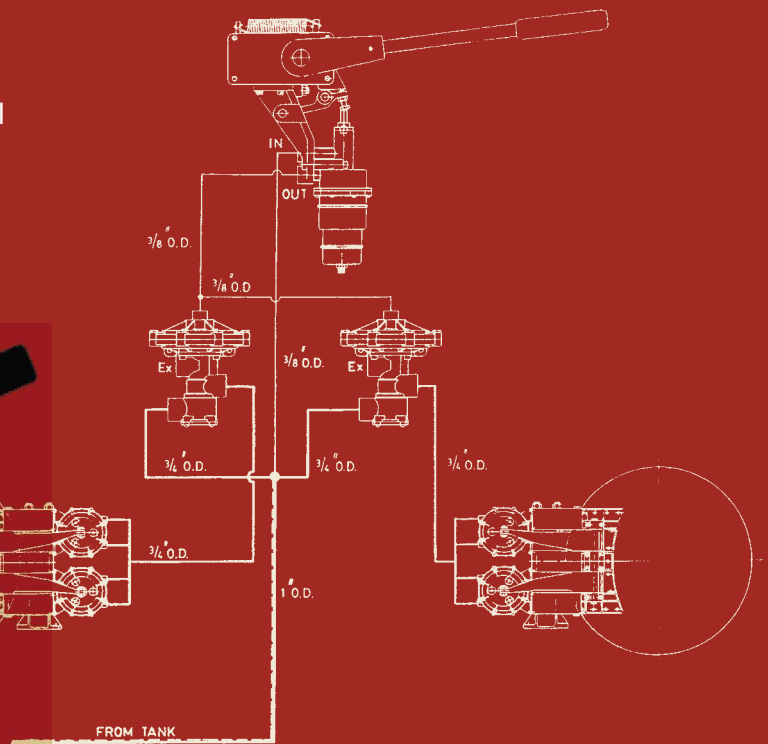

Kobel Manufacturing produce a variety of different valve for all pneumatic function . Contact our office for more detail .

Model #2588

Model #3329

Kobel succe in the oil indu try i ba ed on it commitment to providing equipment built to with stand the har he t of working condition . The trength and craft man hip of Kobelt drilling valve prove to be no exception.

The Driller Valve Model 2588 i con tructed entirely in durable bronze and tainle steel, uited for land and off hore application , even corro ive salt water environment . It i available in variou pre ure rating , but i u ually recommended at 0 to 100-120 p i maximum.

The cam on the brake valve i removable, and can be ground to provide pecial pre ure profile . Some operator prefer to have a gradual pre ure increa e on the low end, e pecially working with a light rig load and a more rapid pre ure increa e for heavier load . The driller valve i extremely re pon ive to handle movement and can be graduated within 1 p i up and down. Thi i extremely important a good feel and re pon e i a mu t.

It i important, however, to remember that the 2588 model cannot be plumbed into the brake directly. A pre ure compen ated relay valve uch a Model 3329 i required to increa e the flow to the brake it elf (ee above diagram).
